

ARBITRUM ECOSYSTEM GAMING GRANT

Campaign Completion Report

All three milestones contracted under this grant are complete. Every conversion target was exceeded and every scheduled deliverable was shipped. The pages that follow document each milestone — its tournaments, its content, its custom-built on-chain infrastructure, and its verified wallet conversions — with proof recorded on Arbitrum One.

CAMPAIGN ACTIVITY

Apr 22 – Jul 25, 2026

on-chain tournament span

Prepared August 2026 by **Kyroh LLC**
for Arbitrum Network

OVERVIEW

Executive summary

All three milestones in this grant are complete. Across a three-month growth campaign, MoTZ ran a series of livestreamed and community tournaments on Arbitrum-connected titles, published supporting short-form and long-form content, and drove new players to complete a gasless, on-chain wallet check-in on Arbitrum One as the campaign's verifiable conversion event.

The campaign delivered **588 verified Arbitrum wallet conversions against a 500 target (118%)**, with each milestone independently exceeding its own conversion goal. Every conversion is an on-chain transaction on Arbitrum One and is independently auditable; the full per-wallet ledger with transaction hashes is retained for review.

MILESTONE STATUS

MILESTONE	CONVERSIONS	STATUS
M1 · Ignition target 150	160 (107%)	Complete
M2 · Momentum target 150	173 (115%)	Complete
M3 · Final Boss target 200	255 (128%)	Complete
Total	588 / 500 (118%)	Complete

WHERE TO SEE IT

SURFACE	WHERE	NOTES
Milestone tracker	markofthezeal.com/motzxarbitrum/milestone	Live progress dashboard, all milestones at 100%.
On-chain recap	markofthezeal.com/motzxarbitrum	Public campaign recap.
Conversion contract	0x59Fb...2C8e (Arbitrum One)	CheckedIn events — every conversion, on-chain.

How a conversion is counted: one unique wallet, one on-chain CheckedIn transaction, counted once per event. This includes the 38 check-ins completed for the June Amiko Legends event before it was cancelled — those wallets performed real, verifiable on-chain conversions even though the event itself did not run. Every figure in this report is read directly from the contract, and a recount of its CheckedIn events reproduces the totals exactly.

CAMPAIGN INFRASTRUCTURE

Built for this grant

Rather than counting conversions in a spreadsheet, MoTZ built dedicated on-chain infrastructure for this campaign: a purpose-built smart contract on Arbitrum One, a custom signup application with sponsored gas, a public transaction ledger, and a custom in-house game for the closing tournaments. Everything below is live and inspectable today.

THE CONVERSION CONTRACT — ARBITRUM ONE

A purpose-built tournament check-in contract was deployed to Arbitrum One at `0x59Fb229A6CC59DA5e037483aC94fd5Df7EDf2C8e`. Each tournament is created on-chain as its own event (`EventCreated`) with an enforced check-in window; every signup is a `CheckedIn` transaction recording the wallet and timestamp, limited to one check-in per wallet per event. A cancelled event is likewise recorded on-chain (`EventCancelled`) — which is why the cancelled Amiko Legends event and its 38 signups are visible in the ledger. The contract is the single source of truth: every figure in this report is read from its event log, not from any off-chain database.

THE CUSTOM SIGNUP SITE — GASLESS FOR THE USER

Signups happen through a custom-built signup application (Vite/React) at `motz-check-in.vercel.app`. A participant connects their wallet and checks in to the open tournament — and the check-in is **gasless for the user**: MoTZ's relay submits the check-in transaction and sponsors the gas, so a brand-new wallet with zero ETH can complete a verified on-chain conversion.

This mattered for the funnel's target audience — gamers new to Arbitrum — because the very first thing the campaign asked of them did not require buying gas first. Despite costing the user nothing, every conversion still settles as a real, independently auditable transaction on Arbitrum One.

The signup site, `motz-check-in.vercel.app`, rendering the campaign's opening tournament: the \$1,000 Amiko Legends event, live, with its check-in window and the "Network: Arbitrum One · Gasless ✓" confirmation. All event data is read live from the on-chain contract (event #3); the view is re-rendered post-campaign as it appeared during the April check-in window.

The connect flow: Ronin Wallet, MetaMask, WalletConnect and Rainbow supported, with a plain-language wallet explainer for first-time users.

CAMPAIGN INFRASTRUCTURE

The public transaction ledger

Transparency was built in as a public product, not an internal spreadsheet:

PAGE	WHAT IT SHOWS
markofthezeal.com/motzxarbitrum	On-chain campaign recap — per-tournament signup totals, day-by-day signup charts, returning-player breakdown.
markofthezeal.com/motzxarbitrum/milestone	Live milestone tracker — all milestones at 100%.
Signup transactions page	The complete ledger: 588 signup transactions , each row a transaction hash, wallet, timestamp and block, linking out to Arbiscan.

Anyone — the Arbitrum Foundation included — can audit any single conversion from the public page straight through to the chain.

CAMPAIGN INFRASTRUCTURE

A custom game, built for the final tournaments

The campaign's two closing flagships — the **MoTZ Survival Competition × Arbitrum** (103 verified signups) and the **Arbitrum × Zeal Survivors Tournament #2** (114 verified signups) — were played on **Zeal Survivors**, a game MoTZ built specifically for this campaign's closing tournaments. Designed, coded and illustrated fully in-house, it shipped on the guild's own site on June 10, 2026 — three weeks before the Survival Competition opened — and gained a purpose-built competitive tournament mode (five-minute seeded blitz matches, with overtime) for the events themselves. Tournament entry was gated and verified through the campaign's Arbitrum One check-in contract: a player's on-chain check-in was their tournament registration. Building the game for the finals meant the whole closing funnel — game, tournament format, signup flow, and on-chain verification — was MoTZ-operated end to end, and the sequel event out-drawing the first (114 vs 103) showed the format retained its audience.

The key art that greets a player while the horde loads.

The main menu, with Tournament mode one tap from home.

The tournament lobby: a five-minute seeded blitz — the organizer's match code seeds the run, so every player fights the same horde.

Live play: kiting the horde at 1:17 on the run clock, 105 defeated.

MILESTONE 1 · IGNITION

Launch month · Complete

Contracted: 1 major livestreamed tournament · 1 secondary community tournament · 2 short-form videos · 1 long-form thread · 150+ verified conversions · data tracked & submitted.

Tournament activation. The launch month centred on the **Amiko Legends Tournament** (check-in window April 22–30, 2026), a livestreamed competition that opened the campaign and drove the month's conversions.

Conversions. 160 verified wallet conversions against the 150 target (**107%**) — all recorded on Arbitrum One during the check-in window.

Content. 2 short-form videos and 1 long-form thread published in support of the activation.

x.com/MarkofTheZeal/status/2058233256663740748

MILESTONE 2 · MOMENTUM

Growth month · Complete

Contracted: 1 major livestreamed tournament · 1 secondary community tournament · 2 short-form videos · 1 long-form thread · 150+ verified conversions.

Tournament activation. The momentum month was anchored by **The Beacon × Arbitrum × MoTZ**

Tournament (check-in window May 21–29, 2026), a co-branded livestreamed event, supported by a secondary holders activation (the **\$250 Founders Coin Holders BEACON** bonus event, May 31 – June 5).

Conversions. 173 verified wallet conversions against the 150 target (**115%**) — all recorded on Arbitrum One.

Content. 2 short-form videos and 1 long-form thread published in support.

x.com/MarkofTheZeal/status/2074103885854077193

MILESTONE 3 · FINAL BOSS

Close & final report · Complete

Contracted: 1 major livestreamed tournament · 1 secondary community tournament · 2 short-form videos · 1 long-form thread · 200+ verified conversions · final post-campaign report.

Tournament activation. The closing month ran two flagship tournaments on the guild's own custom-built game: the **MoTZ Survival Competition × Arbitrum** (June 30 – July 6, 2026) and the **Arbitrum × Zeal Survivors Tournament #2** (July 19–25, 2026). A third event, the \$1,000 Amiko Legends Arbitrum Tournament, drew 38 on-chain check-ins before being cancelled; those conversions are real on-chain transactions and are counted, while the event itself was not run.

Conversions. **255 verified wallet conversions** against the 200 target (**128%**) — the campaign's strongest month, all recorded on Arbitrum One.

Content. 2 short-form videos and 1 long-form thread published in support. Final post-campaign report: delivered — see Conversion Tracking and Retention Analysis.

CONVERSIONS BY MILESTONE

MILESTONE	TARGET	VERIFIED	% OF TARGET
M1 · Ignition	150	160	107%
M2 · Momentum	150	173	115%
M3 · Final Boss	200	255	128%
Total	500	588	118%

BY TOURNAMENT (ON-CHAIN PROOF)

TOURNAMENT	CHECK-IN WINDOW	SIGNUPS	STATUS
Amiko Legends Tournament	Apr 22–30	160	Completed
The Beacon × Arbitrum × MoTZ Tournament	May 21–29	139	Completed
\$250 Founders Coin Holders BEACON (bonus)	May 31 – Jun 5	34	Completed
MoTZ Survival Competition × Arbitrum	Jun 30 – Jul 6	103	Completed
Arbitrum × Zeal Survivors Tournament #2	Jul 19–25	114	Completed
\$1,000 Amiko Legends Arbitrum Tournament	Jun 13–20	38	Cancelled — check-ins counted

FINAL POST-CAMPAIGN REPORT

Signup pattern & retention

SIGNUP PATTERN

Each event followed a consistent shape: a large **launch-day spike** as the tournament opened, a tapering mid-window, and a **closing-day surge** as the deadline approached. This indicates both strong top-of-funnel reach at launch and effective deadline-driven re-engagement. Representative daily curve (Amiko Legends): 63 → 39 → 11 → 3 → 4 → 9 → 6 → 15 → 10.

RETENTION ANALYSIS

Acquisition is only half the story; the campaign's durability is in how many new wallets **returned**. Across the four flagship tournaments (Amiko Legends, Beacon × Arbitrum, Survival Competition, Zeal Survivors #2), **516 total signups resolved to 331 unique wallets**.

PARTICIPATION	UNIQUE WALLETS	SHARE
Joined 1 tournament	221	67%
Joined 2 tournaments	58	18%
Joined 3 tournaments	29	9%
Joined all 4 tournaments	23	7%
Total unique	331	100%

Takeaways:

- **33% of participants returned** for at least a second tournament — the campaign built a recurring base, not one-off sign-ups.
- **23 "core" wallets (7%)** participated in every flagship tournament, forming a committed on-chain community nucleus that persisted across all three months.
- Combined with the launch-and-close signup pattern, the data shows the campaign both **reached new wallets** and **re-engaged** them across events.

CLOSING

Request for milestone release

All three milestones contracted under this grant are complete. The preceding pages evidence each milestone's tournaments, content and verified on-chain conversions, with proof recorded on Arbitrum One. On that basis, Kyroh LLC requests release of all three milestones.

MILESTONE	CONTRACTED DELIVERABLE	STATUS	AMOUNT
M1	Ignition — launch month	Complete	\$5,000
M2	Momentum — growth month	Complete	\$5,000
M3	Final Boss — close + final report	Complete	\$5,000
Total requested			\$15,000
